Objective

Full Stack Developer with 1yr experience building scalable applications using Spring Boot, Django REST Framework, Angular, and MySQL. Skilled in RESTful API design, responsive UI development, and secure full stack solutions.

Education

Sri Venkateswara College of Engineering & Technology, Chittoor (A.P)

2020 – 2024

B.Tech in Electronics and Communication Engineering

CGPA: 8.51

Skills

Frontend	: Angular, HTML5, CSS3, SCSS, JavaScript, AJAX
Backend	: Django, Django REST Framework (DRF), Python, Java, Spring Boot
Python Libraries	: Pandas, Scikit-Learn, Matplotlib, PyTorch
Database	: SQL, MySQL
Tools	: Git, GitHub, GitLab, Postman, VS Code, Eclipse, STS, CI/CD
Concepts	: OOPs, REST APIs, JDBC Template, JPA Repository, MicroServices, Agile Methodology

Machine Learning & AI Skills

- Strong understanding of ML fundamentals — supervised/unsupervised learning, bias-variance tradeoff.
- Hands-on with classical ML algorithms: Linear/Logistic Regression, KNN, SVM, Decision Trees, Random Forest, Naive Bayes.
- Experienced in data preprocessing: feature scaling, encoding, feature selection, PCA.
- Familiar with model evaluation: cross-validation, hyperparameter tuning, Grid Search, Random Search.
- Knowledge of Deep Learning: Neural Networks, RNN, CNN, and transfer learning.
- Understanding of NLP: text preprocessing, tokenization, TF-IDF, embeddings, text classification.
- Familiar with LLMs, Transformers, prompt engineering, fine-tuning, and RAG.

Professional Experience

Full Stack Developer — Virinchi Limited Technologies

June 2025 – May 2026

Developed full stack features for V23, a healthcare platform, using Spring Boot and Angular.

- Designed RESTful APIs and built Angular services with HTTP client integrations.
- Built modules: Facility Management, Appointment Booking, Billing, and Prescription Management.
- Implemented JWT-based authentication with Angular route guards and session management.
- Used JDBC Template for optimized MySQL interactions; designed data models for frontend needs.
- Conducted API testing with Postman; managed version control via GitLab.

Projects

V23 — Healthcare Management Platform — Virinchi Limited Technologies

- Built a full stack healthcare platform with role-based access for Provider and Patient apps.
- Designed APIs for facility onboarding, appointment booking, billing, and prescription management.
- Implemented JWT auth with Angular route guards for secure multi-role login flows.
- Built dynamic Angular components: reactive forms, calendar-based booking, billing dashboards.
- Optimized MySQL queries with JDBC Template for high-volume data handling.

Tech Stack: Spring Boot, Angular, JDBC Template, MySQL, JWT, GitLab

ElectroMart — Multi-Vendor Electronics E-Commerce Platform

- Built a full stack e-commerce platform with Admin, Vendor, and Customer roles using JWT-based auth.
- Developed RESTful APIs using DRF for product management, orders, cart, Wishlist, and reviews.
- Built vendor dashboard with revenue analytics, low stock alerts, and order tracking.
- Developed responsive Angular frontend with dynamic filtering and mock payment integration.

Tech Stack: Angular, Django REST Framework, MySQL, JWT, SCSS, Vercel, Render
