Objective

Full Stack Developer with hands-on experience in building scalable healthcare applications using Spring Boot, Django Rest Framework, Angular, and MySQL. Skilled in designing RESTful APIs, developing responsive Angular UIs, database optimization, and delivering secure, high-performance full stack solutions. Passionate about creating seamless end-to-end user experiences and seeking opportunities to contribute to impactful software products.

Education

Sri Venkateswara College of Engineering & Technology, Chittoor, (A.P)

2020 – 2024

- B. Tech in Electronics and Communication Engineering

CGPA-8.51

Skills

Frontend	: Angular, HTML5, CSS3, SCSS, JavaScript, AJAX.
Backend	: Django, Django Rest Framework (DRF), Python, Java, Spring Boot.
Python Libraries	: Pandas, Scikit-Learn, Matplotlib, PyTorch.
Database	: MySQL.
Tools	: Git, GitHub, GitLab, Postman, VS Code, Eclipse, STS, CI/CD.
Concepts	: OOPs, REST APIs, JDBC Template, JPA Repository, Agile Methodology.
Soft Skills	: Problem Solving, Analytical Thinking, Communication, Leaders Teamwork.

Machine Learning & AI Skills

- Strong understanding of Machine Learning fundamentals, including supervised and unsupervised learning, bias-variance trade off, and overfitting/underfitting.
- Hands-on knowledge of classical ML algorithms such as Linear Regression, Logistic Regression, K-Nearest Neighbors (KNN), Support Vector Machines (SVM), Decision Trees, Random Forest, and Naive Bayes.
- Experienced in data preprocessing techniques including feature scaling, encoding, feature selection, and dimensionality reduction using PCA.
- Familiar with model evaluation and optimization techniques such as cross-validation, hyperparameter tuning, Grid Search, and Random Search.
- Understanding of Deep Learning concepts, including neural networks, Recurrent Neural Networks (RNN), Convolutional Neural Networks (CNN), and transfer learning.
- Knowledge of Natural Language Processing (NLP) techniques such as text preprocessing, tokenization, vectorization (TF-IDF, embeddings), and basic text classification.

- Understanding of Large Language Models (LLMs) and modern AI concepts such as Transformers, self-attention, prompt engineering, fine-tuning, and Retrieval-Augmented Generation (RAG).

Professional Experience

Full Stack Developer — Virinchi Limited Technologies

Sept 2025 – Present

- Developed and maintained full stack features for **V23**, a healthcare management platform, working across Spring Boot backend and Angular frontend for Provider and Patient applications.
- Designed RESTful APIs using Spring Boot and built Angular services with HTTP client integrations to consume them seamlessly.
- Built key modules including Facility Management, Appointment Booking, Billing, and Prescription Management — covering both backend APIs and Angular UI components.
- Implemented JWT-based authentication and authorization with Angular route guards and session management.
- Used JDBC Template for optimized MySQL database interactions; designed data models aligned with frontend consumption needs.
- Built prescription management system for creating and maintaining patient prescriptions.
- Conducted end-to-end API testing using Postman and managed version control with GitLab across frontend and backend codebases.

Projects

V23 — Healthcare Management Platform — *Virinchi Limited Technologies*

- Designed and developed a full stack healthcare platform supporting Provider and Patient applications with role-based access.
- Architected RESTful APIs for core modules including facility onboarding, appointment booking, billing, and prescription management.
- Implemented JWT-based authentication with Angular route guards for secure multi-role login flows.
- Built dynamic Angular UI components including reactive forms, calendar-based booking, and billing dashboards.
- Optimized MySQL queries using JDBC Template to handle high-volume healthcare data efficiently.

Tech Stack : *Stack: Spring Boot, Angular, JDBC Template, MySQL, JWT, GitLab*

Air Pollution Monitoring with LoRa

- Built a real-time air pollution tracker with alert notifications using LoRaWAN.
- Incorporated sensors and LoRa modules to collect and transmit environmental data.
- Processed environmental data and provided real-time alerts.
